*PP Sub*

36. (New) A method for preventing cell damage, comprising: administering to a patient at risk for cell damage a composition comprising a substantially pure polyoxypropylene/polyoxyethylene block copolymer composition, wherein said substantially pure polyoxypropylene/polyoxyethylene block copolymer composition is less toxic than a corresponding non-pure polyoxypropylene/polyoxyethylene block copolymer composition, said substantially pure polyoxypropylene/polyoxyethylene block copolymer composition containing block copolymers with each of the block copolymers having the following general formula:

*PP Sub*

wherein *a* is an integer such that the molecular weight represented by the polyoxypropylene portion of the respective block copolymer is between 900 Daltons and 15,000 Daltons and *b* is an integer such that the molecular weight represented by the polyoxyethylene portion of the respective block copolymer constitutes between 5% and 95% of the respective block copolymer and the polydispersity value is less than approximately 1.07.
